OVERVIEW:

Tenet Healthcare is one of the largest and most respected healthcare systems in the United States, providing comprehensive care through a nationwide network of hospitals, ambulatory surgery centers, imaging centers, and outpatient facilities.

Committed to delivering exceptional patient experiences while advancing clinical innovation and operational efficiency, Tenet continues to invest in modern healthcare technologies that improve care delivery across its portfolio. As part of that commitment, *Tenet partnered with Airwavz to deploy scalable, enterprise-grade in-building wireless infrastructure that supports clinicians, staff, patients, and visitors with reliable connectivity.*

CHALLENGES:

With facilities spanning major metropolitan markets across the country, Tenet Healthcare required a wireless infrastructure strategy capable of supporting a large, geographically diverse healthcare portfolio. Existing connectivity environments varied by property, creating challenges around carrier coordination, deployment consistency, and long-term operational oversight.

Tenet needed an approach that could address:

- + Standardizing wireless infrastructure across a large national footprint.
- + Coordinating multiple wireless carriers across numerous hospital campuses.
- + Supporting critical clinical communications while minimizing operational disruption.
- + Simplifying ownership and lifecycle management responsibilities.
- + Creating a scalable model capable of supporting future growth and technology upgrades.

SOLUTION:

Airwavz partnered with Tenet Healthcare to deliver a turnkey wireless infrastructure program designed to provide consistent connectivity across its healthcare portfolio.

The solution included:

- + Enterprise-wide deployment planning and program governance.
- + Neutral-host infrastructure supporting multiple wireless carriers.
- + End-to-end carrier engagement, onboarding, and management.
- + Ongoing monitoring, maintenance, and lifecycle oversight.
- + Scalable infrastructure architecture designed to accommodate future network demands.

COLLABORATION & EXECUTION:

Airwavz worked closely with Tenet's corporate real estate, facilities, and technology teams to establish a repeatable deployment framework that could be implemented efficiently across multiple markets.

By centralizing carrier coordination and project management, Airwavz reduced administrative complexity while maintaining alignment with local operational priorities at each facility.

RESULTS:

Through its partnership with Airwavz, Tenet Healthcare established a scalable wireless infrastructure platform supporting connectivity across millions of square feet of healthcare space nationwide.

Key outcomes include:

- + Standardized deployment methodology across multiple facilities.
- + Improved wireless coverage for clinicians, staff, patients, and visitors.
- + Reduced operational burden associated with carrier management.
- + Greater scalability for future expansion and technology modernization initiatives.
- + Enterprise-wide visibility into infrastructure performance and lifecycle management.
